<p>Chunk Exercise</p> <p>Biology 1 Overview</p> <p>When we study science, including biology, it is important to remember the interrelationship of science, technology and society.</p> <p>The exploding deer population in many areas can cause lots of problems, ranging from the costly destruction of landscaping to traffic accidents to human illnesses like Lyme disease. A change in the population of an organism is fundamentally a scientific problem, but as this example shows, a scientific problem can also have economic and public health consequences.</p> <p>Technology is the application of scientific discoveries to solve problems and meet human needs. Let's look at a couple of uses of technology. Airbags in cars help reduce injuries in accidents. Medical equipment used to detect and treat diseases is another example of technology.</p>	<p>John Burgess My Account</p>
